

Davy de Souza Assunção

Senior Frontend Engineer | Architecture · Platform · Micro Frontends · BFF

Manaus, AM, Brazil · (92) 992939794 · davydesouzabar@gmail.com · github.com/DavySz · linkedin.com/in/davy-de-souza-assunção-0b748318

PROFILE

Frontend Software Engineer with experience in financial products and digital platforms, working beyond feature delivery across architecture, platforms, technical standards and the systemic evolution of frontend ecosystems. Experience with React, TypeScript, React Native, Micro Frontends, BFFs, observability and Design Systems. Currently working across the Fretebras fintech tribe, after founding the Frontend Pool and acting as its technical reference.

PROFESSIONAL EXPERIENCE

Fretebras Internet e Serviços Ltda. — Senior Frontend Developer

Jun 2025 – Present | React · TypeScript · React Native · Node/NestJS · Micro Frontends · BFF

- Founded the Fintech Frontend Pool, defining its operating model, responsibilities, processes, documentation and guidelines; the pilot model was later adopted by the Marketplace as well.
- Works across the entire Fintech tribe — B2B Credit, B2C Credit, BaaS and Payments — in an ecosystem of 9 Micro Frontends, 6 BFFs and 4 developers in the Pool.
- Technical reference for the Pool: code reviews, work distribution, RFCs/ADRs, technical discussions, debt prioritization and representing frontend with Product and Design.
- Built the Toolkit SDK, a centralized TypeScript library for entities and utilities shared across MFEs, eliminating duplicated rules. The 2026 move to alphanumeric CNPJ was rolled out through a single central library update.
- Built the Tracking SDK, an event orchestrator with batching, retry with backoff, failure persistence in IndexedDB, context enrichment and BFF/Kafka integration, contributing to a strong cost reduction.
- Creation and maintenance of BFFs in TypeScript/NestJS, defining architecture, templates, endpoints, authentication/authorization — including DPoP — and observability. The Pool maintains 6 BFFs.
- Micro Frontends with React, Webpack and Module Federation, creating remotes and integrations through contexts and events and solving runtime, communication and loading issues, including chunk loading.
- Definition of the ecosystem's technical standards, covering BFFs, state machines, Command Pattern, tracking decorators, observability and shared libraries; developer mentoring.

Fretebras Internet e Serviços Ltda. — Mid-level Frontend Developer

Jun 2024 – Jun 2025 | React · TypeScript · React Native · Kotlin

- B2B Credit and corporate internet banking products with React and TypeScript, including digital account, debit, credit, statements and PIX.
- Contributions to banking features such as cards, TED and PIX, plus technical and product refinement, planning and retrospectives.
- Evolution and adoption of the Fretebras Design System across frontend applications, including legacy code cleanup and new feature development.
- Growing involvement in architecture, quality and technical decisions, preparing the transition to cross-team work as a Senior.

Loldesign Soluções Digitais Ltda. — Mid-level Full Stack Developer

Feb 2022 – Jun 2024 | React · React Native · Kotlin · Java

- Development of products for Fretebras with React Native on mobile and React/TypeScript in the back office.
- React Native and native Android integration in Kotlin/Java, building a bridge between the applications and handling dependency compatibility, Gradle and integration across architectures.
- Work on the Rede Credenciada product, later Redes e Benefícios, covering fuel stations, refuelling, payments, cashback, insurance and assistance.
- Participation in banking features, including PIX, cards and TED, in a white-label platform integrated into the existing Android application.
- First hands-on experience with plugin architecture, Design System, Clean Code, design patterns, testing and frontend architectural organization.

EDUCATION

FIAP — Systems Analysis and Development · 2023–2025

Fundação Matias Machline — Technical High School in Information Technology · 2019–2021

SKILLS

Frontend: React, TypeScript, JavaScript, React Native, Angular, Next.js, Micro Frontends, Webpack, Module Federation, Design Systems, Feature-Sliced Design

Backend / BFF: Node.js, NestJS, BFF, MongoDB, Java, Spring Boot, Kotlin

Architecture: Software Architecture, Clean Architecture, Hexagonal Architecture, DDD, Design Patterns, Clean Code, SOLID, State Machines

Observability: Sentry, Grafana, Rancher, Tracking, Error Notification, OpenTelemetry patterns, Kafka

Engineering: RFCs, ADRs, Code Review, Testing, TDD, Technical Debt, Agile, Scrum, Kanban
